digital wholesale solutions

Power in Partnership

THE GREAT SWITCH OFF

The Public Switched Telephone Network (PSTN) will reach the end of its life in December 2025. After this date, any services supported on Wholesale Line Rental (WLR), including **Single Analogue Lines, Multi-Lines, ISDN2 and ISDN30, will need to move to alternatives.** The big switch off will also impact LLU SMPF, SLU MPF, Narrowband Line Share and Classic Products.

The Big Switch off will impact broadband customers as well. Most broadband ADSL and FTTC services are supported by Single Analogue Lines. When this service is switched off, **the broadband product will need to move to a Single Order variant.**

**FTTP Coverage
Openreach Plan of Record:**

4.7m	Premises passed May 21
5.8m	by Sept 21
7.1m	by end of 21/22
25m	by end of 2026

May 18 — Openreach consultation for the withdrawal of WLR by December 2025

Sept 18 — Industry Working Groups commenced

June 19 — Trial Exchanges Salisbury and Mildenhall proposed, and suggested approach opened for consultation

Dec 18 — Formal Notice of WLR Stop Sell

Sept 19 — SoGEA trial concluded and Openreach progress SoGEA to early market deployment (EMD) phase

Jan 20 — Commercial offer for the trial exchanges announced for wholesale consumption and Salisbury and Mildenhall trials commence

Dec 20 — Salisbury Exchange Stop Sell implemented – allows early learning with Communication Providers

April 21 — Regulatory Enablers come into force; Openreach have freedom to change pricing of their copper service products when an exchange is enabled for fibre. For more information click below:

Consultation on Copper Retirement Process

Consultation on Wholesale Fixed Telephone Market Review

May 21 — Mildenhall Stop Sell implemented

June 21 — Wider Stop Sell programme begins with exchanges added regularly

Jan 22 — Single Order Transitional Access Product (SOTAP), a variant of single order ADSL released for Early Market Deployment

Dec 22 — Salisbury and Mildenhall trials close and products withdrawn

June 23 — No new WLR Communication Providers will be accepted for establishment

Sept 23 — Nationwide Stop Sell of WLR. Transfers and activation of Calling and Network features will still be accepted

April 25 — Orphaned assets phase will commence – during this stage Openreach will work with providers to move customers who have not yet taken action

Dec 25 — WLR Withdrawal and closure of the PSTN network

EVERYTHING YOU NEED TO KNOW ABOUT THE FIBRE EXCHANGE UPGRADES

THE STOP SELL POLICY

The Stop Sell Policy – Trigger for Stop Sell

> Exchange will have more than 75% Ultrafast Coverage* based on premises with Customer Ready for Service (CRFS) availability
> Exchange coverage is determined against Total Network Address Points (NAD Keys) within the exchange

*GFAST with speeds over 300mb + FTTP

Timing of Stop Sell

> Stop sell will be notified once an exchange has over 75% of Customers Ready for Service (CRFS) Ultrafast enabled or when there is a high guarantee that the exchange will reach 75% within 12 months
> Openreach have, as of June 2020, identified **117 exchanges** that they believe will reach 75% fibre availability by June 2021 so have issued 12 months' notice to Stop Sell Copper products in these exchanges. See FTTP Exchanges from page 16.
> Openreach have also added an **additional 51 exchange locations** as of the 5th October 2020. These 51 exchanges will have the STOP SELL policy applied as of the 5th October 2021.
> Openreach have also added an **additional 51 exchange locations** as of the 4th January 2021. These 51 exchanges will have the STOP SELL policy applied as of the 4th January 2022.
> Openreach have also added an **additional 77 exchange locations** as of the 29th April 2021. These 77 exchanges will have the STOP SELL Policy applied as of the 29th April 2022.
> Openreach have also added an **additional 86 exchanges** as of the 2nd August 2021. These 86 exchanges will have the STOP SELL Policy applied as of the 2nd August 2022.
> If the trigger point of over 75% CRFS cannot be met within 12 months the stop sell will not be implemented until that exchange reaches 75% (which may take longer than 12 months)
> Further exchanges may be added at any time and the programme will be constantly reviewed by Openreach

How will I find out if my customers are situated within any of the targeted exchanges?
Please liaise with your Account Manager for more information

Stop Sell Policy and Product Scope

Stop sell applies at a **premises** level only where that premise has access to an available GEA-FTTP product. Where a premise has access to FTTP there will be no new supply of other products, CP Transfers, working line takeovers, addition of broadband to voice lines, bandwidth modifications, start of stopped lines or migrations to non-Ultrafast products.

> If a premise has GEA-FTTP available to order, then **only** GEA-FTTP is available to that premise and instantly become within the scope of stop sell
> If a premise **does not** have GEA-FTTP available, SOGFAST, SOGEA, GEA-FTTC, SOTAP (where no fibre is available), MPF & WLR (only until September 2023) will be available

The same Stop Sell principles will apply for the fibre exchanges as the Salisbury trial exchange (note: the stop sell principle matrix has changed as a result) see below.

Considerations will also be given to investment policies in the copper network which may include VDSL Cabinet capacity and repairs of the copper network.

Order Journeys > Existing product at a premise > New premise	If the premise Is ENABLED for FTTP	If the premise is NOT ENABLED for FTTP
WLR/ MPF and SLU MPF Provision including new supply, transfers and working line take over etc.	Restricted	No Change – this will follow nationwide Stop Sell in September 2023. If the premise has availability for Single Order products such as SOGEA. This should be chosen over WLR + FTTC.
WLR/ MPF and SLU MPF Modify that increase the asset base (including increase and decrease of channels)	Restricted	
LLU-SMPF, SLU-SMPF and FTTC Provision and Modify	Restricted	
SOTAP and MPF Provision, Speed Upgrade and Modify	Restricted	
Non Standard Lines (non served premises, short duration lines and hot sites)	No change until available on FTTP	

Remember Stop Sell is to ensure your base doesn't grow prior to the products being withdrawn. Where possible provide Single Order Products like SOGEA or FTTP. For more information about these products see from page 8.

No move Back to Copper

In addition to stop sell – once a premise moves to FTTP a "no move back to copper" policy from the date of the stop sell notification being issued will come into effect. In this situation, the same stop sell situations would apply to that premise.

This will only come into effect from April 2021 (subject to regulatory enablers) and be applied at that point to premises with working FTTP lines that have had stop sell notifications published up to that date and onwards.

If there is a no move back to copper in place on FTTP deployments – what happens if my customer loses a analogue service they really need and didn't tell us about?
Openreach are looking to be able to provide a Rapid Reversion Process where there is a threat to life. Always ensure your following best practise guidelines.

WHAT DO YOU NEED TO DO NOW?
Your Checklist

Check your customer base data to see who is affected in these exchanges (DWS can assist with this: help us by helping you become an Early Innovator)

Implement the Best Practice Guidelines into your point of sale and operational activities

Check and update customer contracts - your customer contracts could need to be updated to reflect the withdrawal of WLR products.

Review your commercial terms - some providers offer free installations and transfers but keep in mind that some of these customers may need to move prior to the end of their term.

Tell your customer what is happening – we have provided white labelled correspondence if you wish you to utilise this

Liaise with your customers to;

> Understand their mission statement for the future (Single Use Broadband required or are Voice services required too – HVS/VOIP)

> Do they fall under the CNI (Critical National Infrastructure) or have CNI functions connected to their service?

> Do they have other services attached to their lines? i.e. alarms, PDQ machines, CCTV

> Do they have services with another provider (i.e. Broadband with you, Line Rental with another provider)?

> Do they wish to retain their current number/s?

We've provided a useful Customer Information Gathering Form you can use and keep with your customer account details, feel free to adapt this and use for your customers. It will help you understand your customers migration journey.

[Download Customer Information Gathering Form]
Best Practice

The Openreach Trial Best Practice Guide is expected to extend to the 117 exchanges and Nationwide withdrawal program, this can be found at www.offta.org.uk within the Best Practice Page of their website. We recommend reading the guide and if you have any questions please email:

greatswitchoff@digitalwholesalesolutions.com for support

DWS Best Practice:

For Residential Customers:
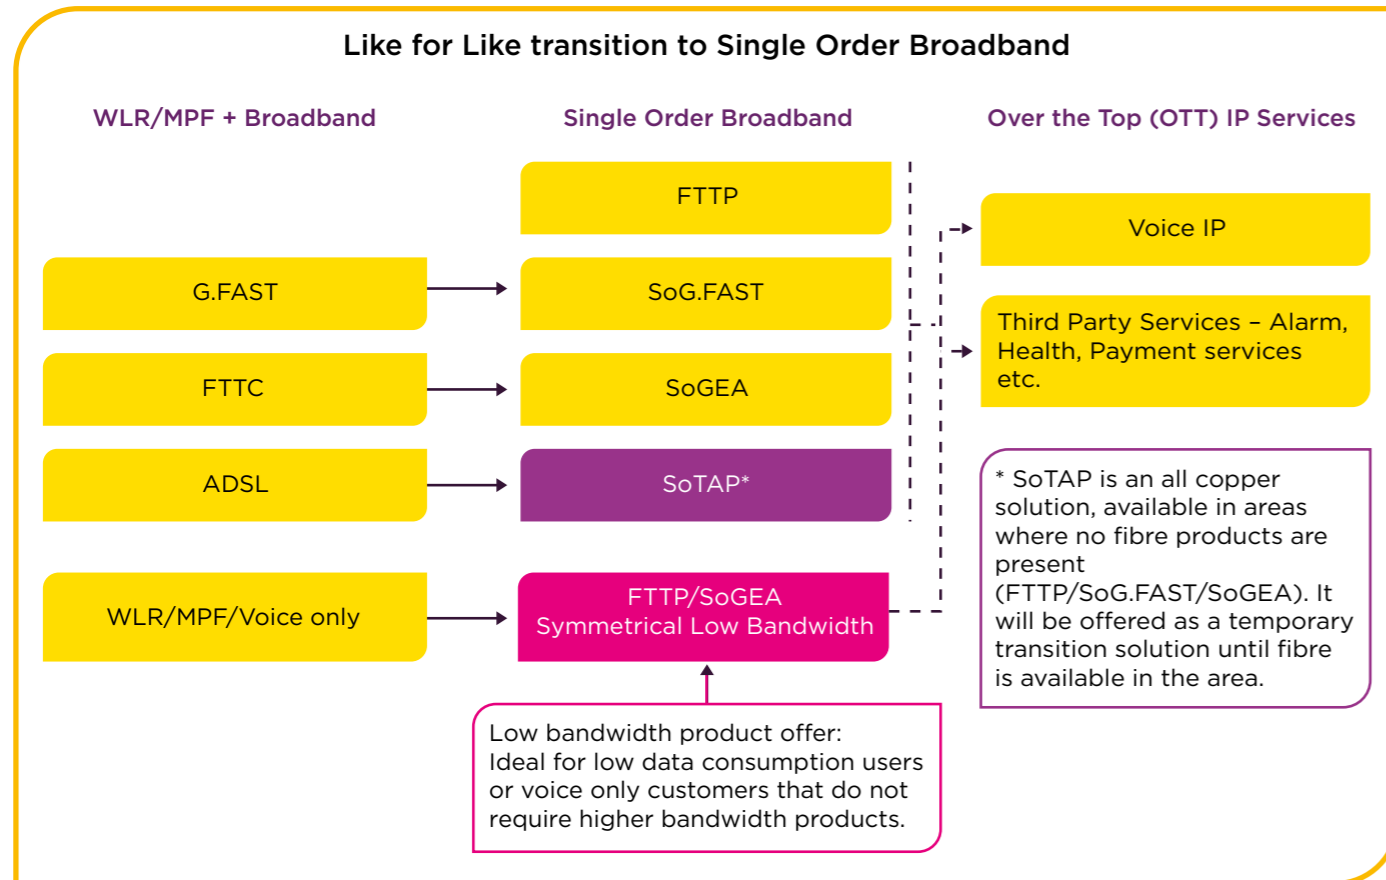

> DUTY OF CARE – Proactively try to identify lines with special services by asking your customer: Do you have any health care or alarm devices that could be used by your telephone line? You will also need to ensure your **customer is aware such devices need to be VOIP compatible** and that they have a **local power supply available** to power such devices. You should also be identifying whether your customer wants to **retain their current phone number**

> TIME CONSCIOUS – If your customer does have additional services on the line, **allow them time to contact their appropriate equipment provider** (Local authorities for health pendants or alarm/monitoring provider). It is recommended a minimum of 10 working days

> UNDERSTAND THE JOURNEY – The correct order journey can improve the experience of the migration. For residential customers it is important to **ask about extensions to their property** and **chose the right type of installation** alongside identifying the requirement to retain their number

> POINT OF SALE – Provide as much information as possible at the point of sale, this should include you providing a clear understanding to your customer **what is happening, risks, if anything will change on the premises** and you should provide a **dedicated point of contact** to help if something goes wrong

> BE FLEXIBLE – It is better to **postpone a migration** than let vulnerable customers lose special services they rely on. In cases where there is a threat to life, a **roll back process** will be available

For Business Customers:

> DUTY OF CARE – Business best practice principles will need to follow those of residential, but you should be mindful that there might be different types of special services you need to create a special **point of sale script**, for example: You will need to ask if the customer using card payment terminals that could be business critical. You should also be identifying whether your customer wants to **retain their current phone number**

> TIME CONSCIOUS – Businesses can have **complex migration activities and porting requirements**; you need to allow time for them to co-ordinate these activities

> CLEAR COMMUNICATIONS – This is also important for residential lines but where possible all parties impacted by the migration should act with integrity, providing clear communication to ensure a seamless transition. **All parties, voice, broadband and special service provider should work together**

> UNDERSTAND THE JOURNEY – The correct order journey can improve the experience of the migration. For business customers it is important to know **what type of equipment they have including any plans for IP Voice**, if you are not their VOIP supplier. This will enable you to provide the correct type if installation type

NEW SINGLE ORDER BROADBAND SOLUTIONS

Guide to the new technology

The below diagram shows the like-for-like technology transitions from WLR/MPF + broadband to the new Single Order broadband.

Like for Like transition to Single Order Broadband

WLR/MPF + Broadband	Single Order Broadband	Over the Top (OTT) IP Services
	FTTP	Voice IP
G.FAST	SoG.FAST	Third Party Services – Alarm, Health, Payment services etc.
FTTC	SoGEA	
ADSL	SoTAP*	
WLR/MPF/Voice only	FTTP/SoGEA Symmetrical Low Bandwidth	

* SoTAP is an all copper solution, available in areas where no fibre products are present (FTTP/SoG.FAST/SoGEA). It will be offered as a temporary transition solution until fibre is available in the area.

Low bandwidth product offer: Ideal for low data consumption users or voice only customers that do not require higher bandwidth products.

Improve customer experience with new installations:

New installation options, also known as site visit reasons, are available to Single Order products to improve the experience:

Engineer Activity	No Site Visit	Standard	Standard + Prove IP Voice	Premium	Premium + Prove IP Voice
Enables the network to provide service without visiting EU site	✔				
Enables the network and attends EU site to install/setup the service		✔	✔	✔	✔
Carries out installation of Wi-Fi enhancements and tests/ optimises the service, along with a demo to the EU				✔	✔
Tests the IP voice service			✔		✔

EU = End User

An additional module that Openreach plan to introduce will be the 'Install UPS'. This will allow the Openreach engineer to install your third-party battery backup solution. To note, Openreach will not source or provide the battery backup unit.

IMPORTANT - OTT IP Services

OTT IP services are standalone products. They are not included with a single order broadband and require a separate order. For Voice only single lines or low data consumption services (e.g. payment card services), a single order low bandwidth product will be available. The Communication Provider should then offer an over the top Voice service and should be aware of any other required services on the line, though these might be supported by a third party.

## Single Order Broadband - Compatible Routers

DWS currently offer routers which are compatible with the Single Order broadband products. See list below:

| Single Order Product	Technicolor Routers		
	TG588v2	DGA 0122	DGA 4231
FTTP	No	Yes - TBS	Yes - TBS
SOGFAST	No	No	Yes - TBS
SOGEA	Yes	Yes	Yes
SOTAP	Yes	Yes	Yes
ATA port	No	x2 ports	x2 ports

TBS: Two Box Solution, whereby the Technicolor router will connect to the Openreach provided ONT, via the Ethernet WAN port.

Alongside your customers' product set changing, the way customers operate their day to day business functions is also likely to change. Below is an example of a small business customer with analogue office telephones, payment devices and alarm services, all connected via physical wiring and socket extensions.
WLR/MPF + Broadband Line

Analogue phones and payment devices all connected to extension sockets over physical fixed wiring

Following the customer migration, all devices will need to be compatible with IP. Onsite premise equipment may need to be changed.

Single Order Broadband Line

Comms Room

IP enabled phones and payment devices operate wirelessly over the single order broadband

SOG.FAST/SoGEA/SoTAP

(SOG.FAST only)

FTTP

| Telephone extension socket | Master socket (NTE5c) | Analogue telephone | IP wireless phone | Openreach modem (FTTP & SoGFAST) | Laptop | Mobile |

| Switches, firewalls and other devices | Alarm system | IP CCTV | IP payment device | Till system | PC | Modem/router (wireless) |

Below are examples modem/router setups at the main (master) socket for SoGEA services.

Modem plugs into the RJ45 socket on the SSFP

Modem

Redundant socket

SoGEA without IP or ATA voice:

> SOGEA with SSFP

The micro filter is plugged into the standard telephone socket on the standard faceplate.

The only purpose of the micro filter here is to provide a socket for the modem (typically an RJ11).

Modem

Phone socket on micro filter is redundant

> SOGEA with micro filter (no extensions)

Modem | VoIP | ATA

IP Phone plugged directly into modem-router

Master Socket with SSFP

Redundant socket, unless parallel running

SoGEA with IP/ATA voice 'over the top' VoIP:

> SOGEA plus IP Voice

Modem | VoIP | ATA

Analogue Phone(s)/CPE plugged into extension socket(s)

Master Socket with SSFP

Redundant socket, unless parallel running

> SOGEA plus ATA derived voice

Modem | VoIP | ATA

NTE5C Master Socket with VRI isolation faceplate

Analogue Phone(s)/CPE plugged into extension socket(s)
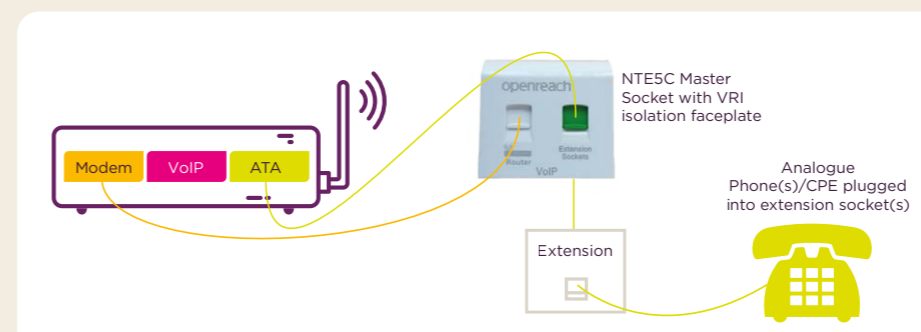

Extension

> SOGEA plus ATA derived voice over extension wiring and isolated VRI

For more information about please refer to the DWS SOGEA Product Description and the DWS Broadband Handbook.

Q: If my customer is based in an exchange area where the FTTP Exchange Upgrade stop sell applies, but they still don't have FTTP available, will they be impacted by the stop sell?

A: Stop sell will only apply where the EU has access to an FTTP product. If they do not have access, they will be able to buy other products such as MPF, FTTC, SOGEA where available.

Q: If I migrate my customer to SOGEA and then FTTP becomes available at their premises, do I need to do a second migration onto FTTP?

A: As part of the FTTP exchange upgrade programme, any premises enabled for FTTP should have migrated to an FTTP solution, this also includes any premises that is connected to SOGEA.

Q: Are there going to be more exchanges confirmed going forwards as part of the FTTP Exchange Upgrade Programme?

A: Yes. Openreach have confirmed that this will most likely become a continual advancement as more and more FTTP is rolled out and are expected to release these details on a quarterly basis.

Q: Do the same stop sell principles apply for the Mildenhall Trial exchange?

A: Mildenhall will migrate all WLR & MPF lines to fibre alternatives inside the fibre footprint and WLR lines to SOTAP or alternative products outside of the fibre footprint. (MPF and SOTAP will be available in a fibre area if there is no spare fibre capacity).

Q: Are there any Openreach incentives/discounts in place for me to transition my customer base sooner and become an Early Innovator for these exchanges?

A: Currently incentives are focused on trial exchanges only, we are currently working with our suppliers to ensure these can be passed down.

Q: What products are affected?

A: The PSTN supports a number of Openreach products: WLR3 analogue, ISDN2, ISDN30, LLU SMPF, SLU SMPF, Narrowband Line Share and Classic products. These products are generically referred to, as part of the industry programme, as WLR products. When the analogue network closes in 2025 these products will no longer be available.

Q: If the customer wishes to keep a copper type services, can they just migrate to LLU?

A: In some circumstances where the customer is not in an exchange area that is impacted by the FTTP Exchange Upgrade stop sell, they can migrate to LLU MPF (only where there is no FTTP availability).

Q: My customer currently has a line rental and broadband service with me but now they only require broadband, what do I do?

A: You can migrate your customer over to a single order broadband product. The voice service will stop working and effectively becomes redundant in this instance. Voice service is an optional add-on to your broadband service.

Q: My customer has a voice only line, there is a significant price difference for them so what can I do?

A: We understand and appreciate that not all customers are the same in terms of their usage. For example, a business may only rely on processing transactions payments on a line and does not require IP Voice or broadband for business applications. In these circumstances, a low bandwidth package is available (0.5 mbps).

Q: Can my customer keep their current phone number?

A: Your customer can keep their phone number if you inform us of this at point of sale / migration order placed but you will need to take out an OTT IP Voice service (to run parallel with your Single Order Broadband product) and indicate that you wish to port the number onto the new IP Voice service otherwise you will lose the number once the service migrates away from the existing WLR or MPF Service.

Q: Is there any push back on any key dates previously referenced in the roadmap due to COVID-19?

A: The 2025 WLR Withdrawal date is not something that can be pushed back, this was defined as a necessity due to the BT group PSTN network infrastructure reaching its end of life. This also means it is crucial that the other key dates leading up to the 2025 withdrawal date also do not get pushed back. This will of course be continued to be monitored as per updates directly from Openreach and OFCOM.

Q: Can I migrate all my services in bulk?

A: We will work alongside you to ensure all of your services migrate / are upgraded to the new solution. At present there is no bulk order option in place, but all orders can be placed via our portals.

Q: What if the only product available to buy is one that as a partner I am not currently set up to provide?

A: Please speak to your Account Manager to discuss these products in more detail - we have all of the tools and services available to help you with your transition to an all IP solution

Q: What is an ATA Port?

A: ATA stands for Analogue Telephone Adaptor. They are used to allow EU's to utilise their old hardware equipment. We will be launching our new Technicolor broadband routers and all models will include an ATA port later in 2020.

Q: If I have an ATA will I still require an IP Voice Service?

A: Yes, your ATA will convert your analogue signals to digital IP Voice but in order to use this you must have an IP Voice product over the top of your new Single order Broadband to transmit the calls. Example: HV.Select Hosted Seat License.

Q: Will customers be able to use their own routers if they are compatible for FTTC?

A: Yes, if your customer is already on an FTTC Enabled router then it will be compatible as SOGEA is built upon the foundations of FTTC.

Router development is underway with our Technicolor router offerings expected later this year.

We are also awaiting updates from Openreach, OFCOM and market leaders in router technological specifications to confirm what will still be compatible and what hardware will become redundant.

Q: Is there a porting process that doesn't cut the circuit moving to VOIP?

A: SOGEA and FTTP orders will need to have a voice order placed alongside the migration order. These do not work like the current SIM2 orders so an OTT (over the top) voice order will need to be raised to run parallel with a significant amount of notice, (e.g. 15 days) in order for the number to port over to the IP Voice service.

Q: My customer is a CNI / vulnerable customer, are they excluded from the FTTP rollout and will they be supported throughout the migration?

A: All customer types are affected due to the nationwide removal of PSTN services. We will of course be supporting you and your customers to make the transition as seamless as possible

Q: What are the lead-times for migrating services over to SOGEA/FTTP?

A: A 15 working day lead time to ensure that any OTT orders that are required can be matched to run parallel to each other. – Openreach have suggested a minimum of 10 working days, please check the best practise guidelines and always consider porting timescales if you need to provide an OTT IP Voice service.

Q: When are the rate cards due for release in order for us to start selling SOGEA?

A: The rate cards are available now, speak to your account manager for more details.

Q: What if my customers business relies on devices such as alarm systems, lift lines, card payment machines etc – will these work on the new Single order products?

A: It is imperative that your customer contacts the vendor of these devices to confirm whether they are IP compatible or not. If the latter you will need to source new devices which are IP Compatible, to allow you to continue operating as a business. Otherwise these devices will cease to work when moving to a Single Order Product.

Q: After the stop sell period can we still undertake CP to CP migrations?

A: Migrations between CP's will still be available but the destination product they are migrating to will need to align with the stop sell rules. Meaning that if the EU is in the FTTP footprint then they can only migrate over to FTTP.

Q: What if there are two providers, one for the broadband and one for WLR?

A: Openreach will recognise the line provider as the existing communications provider, but the broadband providers can move the customer if required.

Q: If my customer wants any additional calling and network features and they sit within the affected exchanges can I still provide these?

A: Yes you will be able to provide these functions until the stop-sell dates, however we would encourage that you arrange to migrate over to FTTP solutions with an OTT voice solution so that your customer is prepared and ready for the PSTN Switch off.

Q: What are the Single Order Products and what do they do?

FTTP: Fastest and most resilient ALL Fibre Product speeds of upto 1 Gbps

SOGFAST: Delivering Ultrafast in a single order, speeds of upto 330 Mbps

SOGEA: Delivering Superfast in a single order, speeds of upto 80 Mbps

SOTAP: Supporting non-fibre areas, speeds of upto 17 Mbps

Q: What if I decide to not take part in the PSTN Switch Off / FTTP Exchange Upgrade and stay with my current product portfolio?

There is no option to opt out of the FTTP trail exchanges. If you have a working WLR or MPF asset in one of the exchanges you will be impacted by the stop sell principles and rules with the expectation that the existing bases will be migrated onto an all IP Solution / alternative product by the end of the trails in December 2022.

Q: Why do I need to act now?

The withdrawal of PSTN copper services has a deadline of Dec 2025 which means any services after this date will cease. It is imperative that you communicate out to your customer base in order for both you and them to be prepared. The change is happening, and you do not want to be left behind.
